Education

B.Tech - Computer Science Engineering

Pragati Engineering College, Surampalem.

2024-2028 | CGPA: 8.86

Intermediate - MPC

Narayana Junior College, Kakinada.

2022-2024 | Percentage: 94%

SSC

Sama School, Jagannaickpur.

2021-2022 | Percentage: 96%

Technical Skills

- Programming: Java (DSA), Python
- Web: HTML, CSS, JavaScript
- Backend: FastAPI, REST APIs
- Tools: Git, GitHub, VS Code

Certifications & Achievements

- NPTEL – Programming in Java Certification
- Participant – MindSprint 2K25 Hackathon
- Participant – Srujana Hackathon
- Solved 100+ coding problems on LeetCode and HackerRank

Career Objective

Aspiring Full-Stack AI Developer skilled in Java, Python, FastAPI, REST APIs, and web development. Passionate about building scalable AI-powered applications and solving real-world problems through backend and frontend technologies.

Projects

MediQueue – Hospital Queue Management System

Tech: Role-Based Access Control, Queue Management, REST APIs

GitHub: github.com/Disaster-Link/DisasterLink

- Built a healthcare queue management system to optimize hospital workflows and reduce patient waiting time.
- Implemented role-based access control for Admin, Doctor, and Patient modules.
- Developed features including automated token generation and real-time queue tracking.
- Integrated a responsive frontend with REST API backend services.

CureBot – AI Medical Assistant

Tech: FastAPI, REST APIs, AI Integration

GitHub: github.com/akarsh277/CureBot

- Built an AI-powered chatbot providing basic first-aid guidance based on user symptoms.
- Developed an interactive frontend using HTML, CSS, and JavaScript.
- Implemented backend services using Python FastAPI and REST APIs.
- Integrated automated AI-based responses and health suggestions.

DisasterLink – Emergency Operations Center

Tech: WebSockets, Real-Time Communication

GitHub: github.com/akarsh277/Disaster

- Developed a real-time disaster response platform for reporting emergencies and coordinating relief operations.
- Implemented live alerts and communication using WebSockets.
- Enabled citizens, volunteers, and authorities to coordinate emergency response operations efficiently.
- Built a responsive interface for seamless access across devices.
